

Episodio 8

- Se crea la lógica para poder enviar el parametro de la ruta de caja uno de las páginas individuales de los posts, se crean las tres páginas html y se agrega una pagina de error o de redirección a la página principal.

Se añade esto en cada uno de los archivos de los posts

```
<h1> <a href="/post">My first post</a> </h1>

<p>Lorem ipsum dolor sit amet, consectetur adipisicing elit. Facilis, nostrum.
Omnis laboriosam modi quia reprehenderit minima, quibusdam nam repudiandae in
alias consequuntur ut quam aliquam unde, iusto officia labore accusamus.</p>
```

Luego se modifican y se optimiza al usar variables

```
<link rel="stylesheet" href="/app.css">
<body>
  <article>
</article>
  <a href="/">Go Back</a>
</body>
```

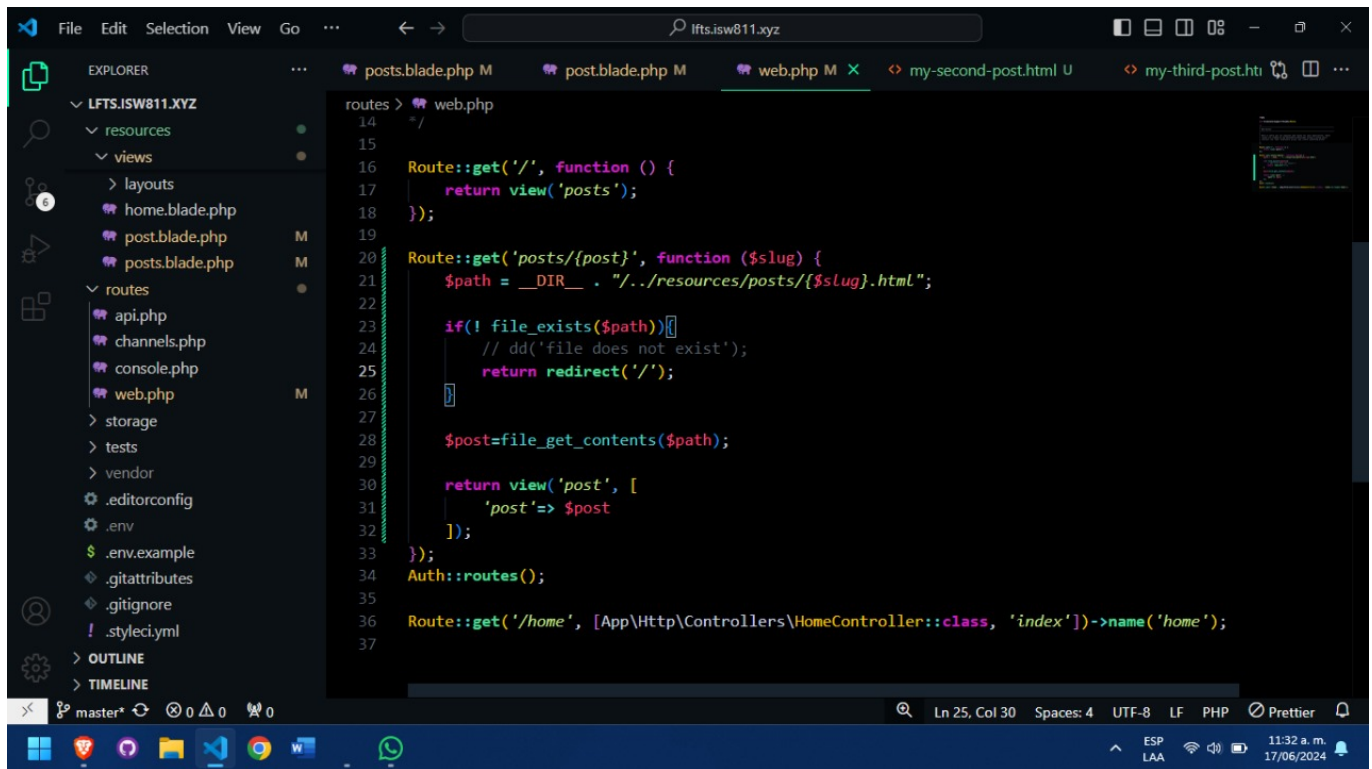

Y para terminar se agrega la funcion de las rutas en el web.php

```
Route::get('posts/{post}', function ($slug) {
    $path = __DIR__ . "../resources/posts/{$slug}.html";

    if(! file_exists($path)){
        // dd('file does not exist');
        return redirect('/');
    }

    $post=file_get_contents($path);

    return view('post', [
        'post'=> $post
    ]);
});
Auth::routes();
```

The image shows a screenshot of a Visual Studio Code editor window. The Explorer panel on the left shows a project structure for 'LFTS.ISW811.XYZ' with folders 'resources' and 'views'. The 'resources' folder contains 'home.blade.php', 'post.blade.php', and 'posts.blade.php'. The 'views' folder contains 'layouts'. The 'routes' folder contains 'api.php', 'channels.php', 'console.php', and 'web.php'. The 'storage' folder contains 'tests' and 'vendor'. The 'tests' folder contains '.editorconfig', '.env', and '.env.example'. The 'vendor' folder contains '.gitattributes', '.gitignore', and '.styleci.yml'. The Outline panel on the right shows the 'routes' folder. The main editor window shows the 'web.php' file with the following code:

```
14 */
15
16 Route::get('/', function () {
17     return view('posts');
18 });
19
20 Route::get('posts/{post}', function ($slug) {
21     $path = __DIR__ . '/../resources/posts/{slug}.html';
22
23     if(! file_exists($path)){
24         // dd('file does not exist');
25         return redirect('/');
26     }
27
28     $post=file_get_contents($path);
29
30     return view('post', [
31         'post'=> $post
32     ]);
33 });
34 Auth::routes();
35
36 Route::get('/home', [App\Http\Controllers\HomeController::class, 'index'])->name('home');
37
```

The status bar at the bottom shows 'Ln 25, Col 30', 'Spaces: 4', 'UTF-8', 'LF', 'PHP', and 'Prettier'. The system tray at the bottom right shows the time '11:32 a.m.' and the date '17/06/2024'.
