

Episodio 20

Se crea una nueva migración

```
php artisan make:migration create_posts_table
```

Se elimina la carpeta de los posts7

Se agrega la propiedad 2,3,4 y 6:

```
public function up()
{
    Schema::create('posts', function (Blueprint $table) {
        $table->id();
        $table->string('title');
        $table->text('excerpt');
        $table->text('body');
        $table->timestamps();
        $table->timestamp('published_at')->nullable();
    });
}
```

Creación de un modelo:

```
php artisan make:model Post;
```

Para crear un post, definir sus propiedades y salvarlo:

```
# Aqui se crea el nuevo post
> $post=new App\Models\Post;
= App\Models\Post {#4813}
# Aqui se definen las propiedades del post
> $post->title='My First Post';
= "My First Post"

> $post->excerpt='euyyuofoerf2y4o987uhwqef8o794';
= "euyyuofoerf2y4o987uhwqef8o794"

> $post->body='jrfwheiopurhyoiuerhofwiuehrpiuqyehwoiufqhyw3e4uyiorpwhedfuhythyeuwqirfghqiu
ewrhvflkjdvcnblkasdjhfgrgoiuewhrgkjefnwhvhwertoighqepñirgpoiwerutyopiuer5tpoiwfñl
kjpgvweeuyyuofoerf2y4
o987uhwqef8o794';
# Aqui se guardan los cambios del post
```

```
> $post->save();  
= true
```

En web.php se cambió slug por id:

```
Route::get('posts/{post}', function ($id) {  
    return view('post', [  
        'post' => Post::findOrFail($id)  
    ]);  
});
```

```
> new App\Models\Post;  
= App\Models\Post {#4815}  
  
> %post=new App\Models\Post;  
  
    PARSE ERROR    PHP Parse error: Sy  
ParseException.php on line 44.  
  
> post=new App\Models\Post;
